

CSIT751 (Core Java)

Module IV– Collections and GUI programming

Theory Home Assignment 4 (Module IV)

Q1. Explain the Collections Framework in Java and demonstrate its use by writing a Java program that stores and displays a list of student names using ArrayList.

Q2. Discuss the concept of hashing in Java Collections and write a Java program using HashMap to store and display roll number–name pairs of students.

Q3. Explain the concept of GUI components and containers in Java AWT. Write a Java program that creates a simple AWT window with a button and a label.

Q4. Explain how Swing components enhance GUI development in Java. Write a Java Swing program to design a simple login form and display a message box when the login button is clicked.

Q5. Explain the Delegation Event Model in Java and demonstrate it by writing a program that handles a button click event using an event listener and adapter class to close the window.
