

CSIT751 (Core Java)

Module II – Java with Object Orientated Features

Theory Home Assignment 2 (Module II)

- Q1.Explain the concepts of *Encapsulation, Abstraction, Inheritance, and Polymorphism* in Object-Oriented Programming with suitable Java examples for each.
- Q2.What are *constructors* in Java? Describe *types of constructors (default, parameterized, and copy constructor)* with example programs, and explain the role of constructors in inheritance.
- Q3.Differentiate between *method overloading and method overriding* with example programs demonstrating each, including a case of overriding in single inheritance.
- Q4.What is an *interface* in Java? Write an example program that defines an *interface with abstract methods*, implements it in a class, and shows the use of default and static methods inside the interface.
- Q5.Explain the use of *final, static, and super* in Java with appropriate examples showing their role in methods, variables, and inheritance.
